

The Department of Psychology and The Back of the Brain-
project invites to two lectures by

Professor Matt Lambon-Ralph

University of Manchester

*‘A multidimensional approach to understanding aphasia
‘types’ and their neural base’*

Abstract: Traditional aphasiology has tended to group patients via subtype “categories” with limited success. In recent work we have begun to explore a different approach which conceptualises variability in patient presentations as points in a multi-dimensional space. This talk will share some recent findings including the dimensions that appear to underpin aphasia variations and their lesion correlates.

&

Professor Alexander Leff

University College of London

‘e-Therapies for aphasia rehabilitation’

Abstract: In this talk I will cover several of the e-therapies we are working on for patients with aphasia. I will give examples of the three stages of app development (patient co-creation; clinical trial; roll out). These are designed for patients with acquired brain injury (stroke, brain tumours, traumatic brain injury) to be able to use with minimal help to improve specific aspects of their language function.

The lectures takes place on Friday, April 20, 2018
at 13.15-15.00

at The Faculty of Social Sciences,
Øster Farimagsgade 5, room 2.0.63.

After the lecture the Department of Psychology invites to a reception at the
department, Øster Farimagsgade 2A, 2nd floor, room 03-2-M202.
